WORK EXPERIENCE

Fermion | Software Development Engineer 2 | July 2025 - Oct 2025

- Built multi-endpoint PostgreSQL failover for a PgBouncer backend with endpoint rotation, circuit breakers, and bounded retries
- Migrated VM-hosted Node.js workers from "screen" sessions to "systemd" units with blue/green deployment.
- Added journald retention, log rotation, Node diagnostic reports, and signal handling for better production debugging

HireRoger Ycombinator Summer 24 | Founding Engineer | Jan 2025 - June 2025

- Built lead sourcing and data enrichment pipelines (CSV ingest, web scraping) to improve extract, transform and load quality and surface higher-quality companies and contacts for sales automation workflows.
- Lead Finder to identify, enrich and rank candidates, using job data, emails, company using typesense fuzzy search engine
- Vercel AI sdk workflows to automate multi channel outreach using email and linkedin for personal outbound campaigns

Nordstone, UK | Fullstack Developer | Jul 2023 - Dec 2024

- Led frontend delivery for RateMyStation, shipping React/Next.js ratings feed plus review and job-detail experiences.
- Standardized responsive navigation and shared layout patterns across sections, improving cross-browser UI consistency and reducing regressions in client-state and server-state driven user flows during feature releases.

Intelliconnect Systems | Fullstack Developer Intern | Dec 2022 - June 2023

- Developed a Frontend for a suit customization app with Next.js 13 and integrated the app with shopify.

SKILLS

Languages: Python, TypeScript, Java

Frameworks: LangChain, LangGraph, Next.js, React, TanStack Query, Zustand, Tailwind, FastAPI, OpenAI

Infrastructure: PostgreSQL, Redis, BullMQ, SQLAlchemy, REST APIs, WebSockets, AWS, Vercel, Linux, screen, systemd, CI/CD

OPEN SOURCE CONTRIBUTIONS

OpenWhisper | [Audible Hotkey Feedback for Dictation](#)

- Improved dictation accessibility by adding audible start/stop feedback for hotkey actions, giving users immediate confirmation without checking UI state.

Cap-go | [Migration to Bun for Improved Performance](#)

- Accelerated developer feedback loops by leading migration from pnpm to Bun, targeting benchmarked faster installs (about 4x faster, roughly 75% shorter) and quicker CI cycles.

PROJECTS

Google Meet SFU

[DEMO](#) | [SOURCE CODE](#)

- Built end-to-end real-time group video conferencing on Mediasoup SFU with Socket.IO signaling, avoiding black-box media vendors (for example, Twilio or LiveKit) and keeping full call-control ownership.
- Added live broadcast support by converting WebRTC streams to HLS using FFmpeg-composited layouts with automated segment lifecycle cleanup with DVR-style playback by stabilizing live-edge and back-buffer handling so viewers could pause and seek.

arXiv7 Langgraph

[DEMO](#) | [SOURCE CODE](#)

- LangGraph-based agentic RAG system for asking questions about indexed arXiv papers which implements hybrid two staged retrieval similar to context7 mcp, first stage resolves namespace, second stage resolves chunks only for that namespace using semantic + lexical search with reciprocal rank fusion
- Langsmith for tracing langchain llm calls and monitoring dashboard with datasets to test the performance of the agents.
- Implements multiple factual hallucinations, content safety, prompt injection, bias and fairness evaluators with experiment runs with csv tables and Experiment feedback scores, latency, token count, and cost

EDUCATION

2019 - 2022 CGPA 9.59/10 Bachelor's of Engineering Degree at SKNCOE

2016 - 2019 Percentage 80.52 Diploma in Engineering at Government Polytechnic Malvan
